III. FIRES:

Overall Fire Risk:

Northern California

Medium to larger dead fuels are still generally below typical moisture values for late November due to the ongoing drought, although they are currently still holding onto some of the latest storm moisture from last week. Smaller dead fuels and dry to dormant live fuels became quite dry again in lower elevations of South Western region of Northern California late last week, in the very windy and very dry post-frontal environment. However, the air mass is now beginning to moisten, so those lighter fuels are moderating upward somewhat. Also lower elevation annual grasses are starting to locally grow again.

Southern California

There will be little or no fire activity across the region through the forecast period.

Preparedness Levels:

National Preparedness Level 1

Northern California

Preparedness Level 1 Multi-Agency Coordination System MACS Mode 2

Southern California

Preparedness Level 2 Multi-Agency Coordination System MACS Mode 2
